Security

Security measures taken to protect your website from cyberattacks, hackers, malware, scams or phishing, and errors.

SSL is installed

SSL certificates are what enable websites to use HTTPS, which is more secure than HTTP.

Website is not up to date with WordPress version

Updates to the latest versions of WordPress will help your site be safe and bug-free.

No malware was found

Website is safe and secured from malicious activities that can compromise confidential data.

Backups

A backup is a copy of your website. If something goes wrong with your site, you can use this backup to restore it without starting over from scratch.

Backups created: 60

It's recommended to have more backups in case you need to restore your website database.

Frequency: Daily

Important data should be backed up at least once a week.

Latest backup: 2024-09-15 08:24:07

A recent website backup allows restoring the site to its latest state if any unexpected issues occur.
